Pima Medical  
Institute

## Robot-Assisted Active Repetitive Motion™ Therapy:

An evidence-based approach  
to improve upper extremity function after CVA.

---

### Learn about:

- Evidence that supports the role of repetitive task training in neurological rehabilitation.
- Evidence that supports increased hand and foot function through Active Repetitive Motion™ Therapy.
- How to effectively use KMI's Hand Mentor™ and Foot Mentor™ as part of a comprehensive neuro-rehab program.
