Home Therapy Moves One Step Closer for Millions of Stroke Survivors

Tempe, AZ – January 26, 2010 – Kinetic Muscles, Inc. (“KMI”) , a leader in providing home-based rehabilitation therapy for stroke victims, today announced that the United States Patent and Trademark Office has issued a Notice of Allowance for KMI’s U.S. patent application, titled “System and Method for Neuromuscular Reeducation.”

“This foundational patent is noteworthy” said Grant Farrell, president and CEO of KMI, “because it covers the unique combination of device features in our Mentor™ technology platform for providing rehabilitation therapy to victims of stroke or other neurological injury. Clinical studies carried out by KMI and by independent investigators show that our devices offer the potential for effective and economical home therapy for these patients. Recovery of limb function and independence has eluded millions of stroke victims but now patients are beginning to see benefits in hand therapy and treatment of drop foot using KMI devices in the convenience of their homes.”

About Kinetic Muscles, Inc.

Founded in 2001 in Tempe, AZ, KMI has leveraged the convergence of medical science with technology to revolutionize stroke rehab. Groundbreaking research in neuroplasticity lead to an innovative product platform using video game technology and robotics to provide Active Repetitive Motion™ therapy for patients suffering from stroke, traumatic brain injury, multiple sclerosis, incomplete spinal cord injury and cerebral palsy. The Hand Mentor Pro™ and Foot Mentor Pro™ represent the first commercialized products in the Mentor platform.

KMI’s products are designed to increase patient engagement in the home and clinic settings, resulting in more intensive therapy which correlates with better results, and demonstrably lower costs to the patient and to the healthcare system. KMI products are installed in leading rehabilitation clinics nationwide and are being used by a growing number of patients in the home setting. The Hand Mentor Pro™ has been the subject of several clinical studies by nationally recognized investigators.
